GMBA 5885 W03 Group Project Instructions

AI-Driven Information Systems Innovation

Overview

The goal of this group project is to help you understand how Management Information Systems (MIS) work in real business practice. You should demonstrate your understanding of *the concepts, frameworks, and analytical tools* learned in this course to analyze real-world problems and design effective solutions.

Building on that foundation, this group project places a special emphasize on artificial intelligence (AI) and its strategic role in modern information systems. Each group will **(a)** analyze a real company, evaluate how its existing information systems support its business strategy, **(b)** and then propose AI-driven innovations that either:

- **Embed AI** into the company's current information system to enhance decision-making, operational efficiency, or customer experience, **or**
- **Develop a new AI solution** that could **transform or replace** the existing information system.

Through this project, you will connect theory to practice, integrate strategic and technological perspectives, and explore how AI can create sustainable business value through MIS.

Timeline of Group Project

Stage	Deliverables	Deadline
Proposal (20%)	4-5 pages, 12-point font, 1.5-line spacing	Nov 15, 23:59
Presentation (20%)	20mins Presentation + 5mins Q&A	Nov 23, Morning
Final Report (20%)	10-12 pages, 12-point font, 1.5-line spacing	Nov 30, 23:59

Stage 1: Proposal (20%) – Due Nov 15, 23:59

Goal

Conduct a strategic and information-system analysis of a real company to identify one focal information system for deeper study in later stages.

Company Selection

Each group should select a target company that you are familiar with or interested in analyzing. A company where you currently work or have worked/interned is highly recommended.

Note

Most companies provide a variety of products or services supported by several information systems. For this project:

- Focus your strategic analysis (e.g., Five-Force Analysis, Value Chain Analysis) on the company's **primary product or service** (when you are doing five-force analysis or value chain analysis).
- In the information systems analysis, concentrate on the information system that supports the company's primary value-generating activities rather than secondary or support functions.

Outside Information

You are encouraged to gather relevant background data to strengthen your analysis. Useful resources include:

- Online research about the company's background
- Library resources such as magazines, trade publications, and academic journals
- The company's annual report and public filings

Deliverables **(4–5 pages excluding reference, 12-point font, 1.5-line spacing)**

Please organize your proposal using the following structure:

1. **Introduction:** Provide a concise overview of the company: name, organizational structure, and primary business activities.

2. **Strategic Analysis:** 1) *Five-Force Analysis:* focus on the company's **primary** product or service, not all their products/service 2) *Value Chain Analysis:* what are the company's unique primary value-generating activities and supportive activities? 3) *Resource-Based View:* what assets does this company have? Any of them is rare and hard to imitate? 4) *Strategy Alignment:* what is the company's business strategy? How it drives the company's organizational strategy and information system strategy?

3. **Information System Analysis:** Among all information systems used by the company, please *pick one that is used to support the company's* ***primary*** *value-generating activity*, and explain 1) the primary functional modules of that information system used in this company (a screen shot of the system homepage, if available) 2) what is the motivation for using this information system 3) what is the result? can this information system help this company to achieve their business strategy? why or why not?

4. **Challenges:** 1) *Problem Identification:* In using/implementing this information system, what are the problems/difficulties that this company encountered? Not management problem, please focus on information systems problem 2) Problem solution: provide your initial ideas on how these problems might be addressed based on your understanding.

5. **References:** Use APA reference format for all references, including books, academic journals, and credible online resources.

Evaluation Criteria

- Depth and logic of strategic and IS analysis
- Clarity of problem identification and relevance to the firm's context
- Coherence and writing quality

Stage 2: Presentation (20%) – Nov 23, Morning

Goal

Present the findings from your Stage 1 proposal and further develop an **AI-driven innovation** that aims to **improve or transform** the information system analyzed in Stage 1.

Deliverables (20mins presentation + 5mins Q&A)

1. **Recap:** Key insights from Stage 1 (Five Forces, Value Chain, RBV, and IS analysis).
2. **AI Innovation Proposal:**
    - Define the **AI opportunity** and explain how AI can solve or enhance the analyzed information system.
    - Describe your proposed **AI-driven solution**, including
        - Type of AI (e.g., predictive analytics, recommendation engine, NLP Chabot, generative AI assistant, automation, etc.)
        - Integration approach: AI embedded into existing IS or development of a new AI-enabled system.
        - Data sources, workflow, and expected business value.

- Present an implementation plan**:** key steps, stakeholders, timeline, risks, and resource requirements.

Evaluation Criteria

- Strength and originality of the AI-driven innovation
- Logical connection between Stage 1 analysis and proposed AI solution
- Feasibility, strategic fit, and clarity of presentation

Stage 3: Final Report (20%) – Nov 30, 23:59

Goal

Deliver an integrated written report combining insights from Stage 1 (analysis) and Stage 2 (AI innovation) into a cohesive strategic proposal.

Deliverables (10–12 pages excluding references, 12-point font, 1.5-line spacing)

1. Executive Summary
2. Company Background
3. Strategic Analysis (Five Forces, Value Chain, RBV)
4. Current Information System Analysis
5. Challenges and Problem Definition (1-5 adapted from Stage 1)
6. Proposed AI-Driven Innovation
    - Technology overview and system architecture
    - Integration plan with existing IS or design of a new AI system
    - Expected business value and strategic impact
    - Implementation roadmap and risk management
7. Ethical and Governance Considerations (AI ethics, data privacy, bias)
8. Conclusion and Managerial Implications (6-8 adapted from Stage 2)
9. References (APA format)

Evaluation Criteria

- Integration of Stages 1 and 2 into a coherent narrative
- Analytical depth and realism of the AI solution
- Application of MIS frameworks and AI concepts
- Report organization, clarity, and academic integrity

AI Use Policy

- Ensure that your Turnitin plagiarism review report shows a **similarity rate below 15%**.
- Please indicate **whether and how** you use AI to finish your work (e.g., proposal, final report.)
